Sprint #2 Report

EasyRoute

May 8, 2024

Actions to stop doing:

- stop exploring ArcGIS Pro possibilities

Actions to start doing:

- adding frontend to map
- look for terrain images (tfm(?) files) → to show elevation and hills
- adding a search bar
- more clear start and end route
- add route customization

Actions to keep doing:

- frequent communication between team members
- communicate git pushes
- research
- refine the api we are using make sure we have a good understand of customization later

Work completed/not completed:

- Completed:
    - researched ArcGIS Pro + other routing APIs and their capabilities
    - ability for user to calculate route from clicking on location and destination
    - created routes are highlighted
- Not completed:
    - search bar
    - clear start and end of route (right now just creates a route through building clicks)

Work completion rate: 75%
